- Set your options within user friendly interface, no coding is required.
- Works on Windows and on MAC.

Before you begin

Make sure to setup your site in Dreamweaver first before creating a page, if you don't know how to do this please [read this](#).

Installing the extension

Read the tutorial at <http://www.dmxzone.com/ShowDetail.asp?NewsId=4671>

Login, download the product, and lookup your serial at <http://www.dmxzone.com/myZone.asp?Section=purchases>

Get the latest extension manager from Adobe at http://www.adobe.com/exchange/em_download/

Open the .mxp file (the extension manager should start-up) and install the extension.

If you experience problems please read the FAQ at <http://www.dmxzone.com/index.asp?Typeld=7&CatId=687> before contacting support.

The Basics: Adding Tooltips to Links

Introduction

In this tutorial we'll show you how to create a basic popup that fades in and has its own close button. The popup will also hide if the user moves the mouse out.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display [rich content](#) and tips with just a few clicks.

Customize the display of the tool Rich Content contains a combination of content forms include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

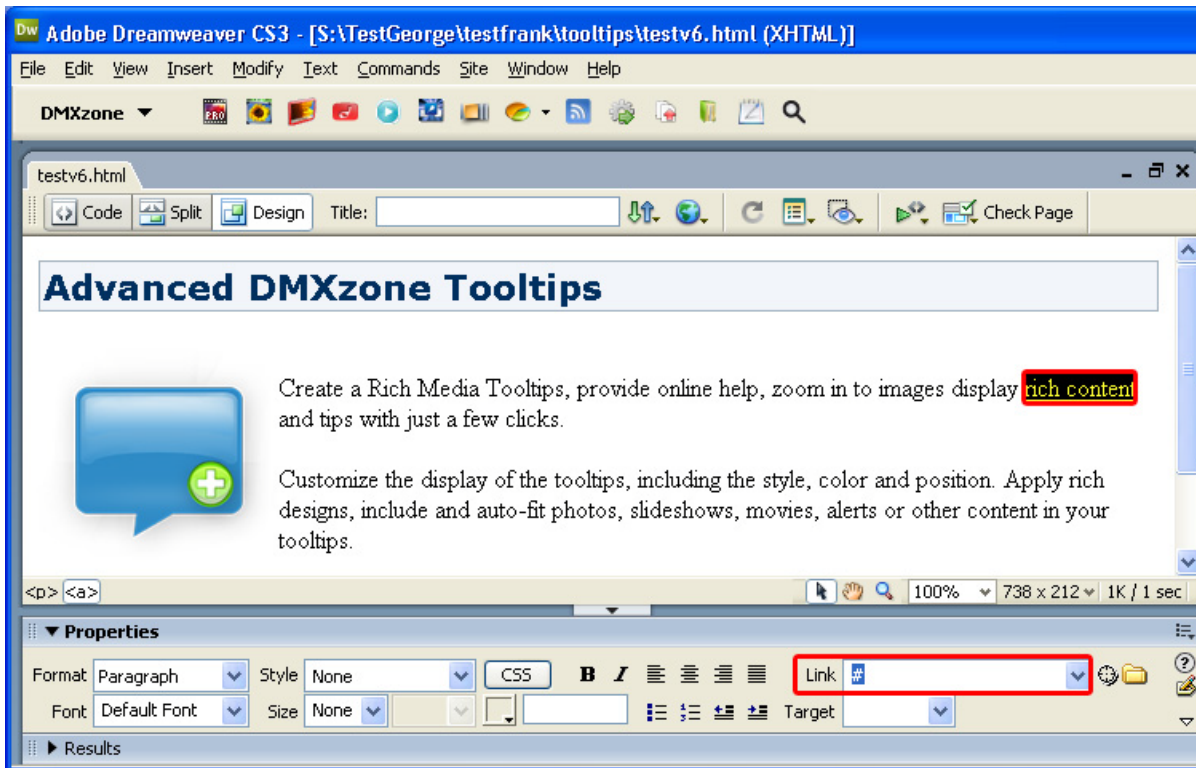

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

Creating the Tooltip

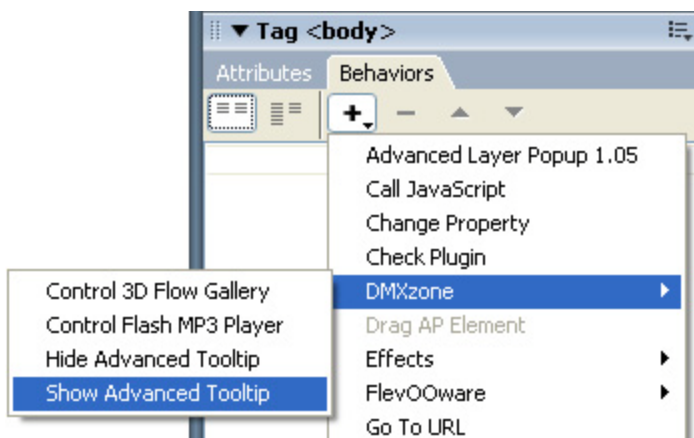

1. Create a new HTML page

Create a new or open an existing HTML page. Include a link by selecting some text and adding a # in the link field of your property inspector and save the page.

2. Applying the extension

Select the text or image that has the link on it (we select our text), open the **Tag** panel in Dreamweaver, select the **Behaviors** tab press on the + icon and choose **DMXzone -> Show Advanced Tooltip**.

A new popup appears

Show Advanced Tooltip

3. Setting the Positioning and Contents options

For this tutorial we enter a basic text in the **Content** field, we type **“Rich Content contains a combination of content forms”**. You can also add rich content such as images, slideshows, or other (dynamic) content.

We set the **Width** and **Height** to **auto**, this means that the size of the tooltip is automatically determined. We define the **Show at** property to **bottom-right** and **Outside**. We set the **X** and **Y** properties to **auto**. If you set these options to **cursor**, the tooltip will follow the cursor.

4. Choosing the Behavior options

We leave the **Effect** to **fade** and the **Easing** to **Outquad**. Feel to experiment with other effects and easing options and experience the rich range of options and combinations. We the **Effect Duration** to **600** but change the **Effect Delay** to **300** to start the appearance of the tooltip. We also leave the **Close when** option to **mouse out** to hide the tooltip again when we move the mouse out (you can also set it to **click out**, which requires a click outside the link area to close the tooltip). We check the **Close button** to insert a close button in the tooltip.

5. Setting the Style options

We set the **Style theme** option to **blue**. To give our tooltip a nice blue background **with a shadow**. And we press **OK**.

Help

Select a predefined style template, that will "wrap" your tooltip contents. NOTE: If you want your custom look and feel:

- Create your custom tooltip inside the page and give it some id.
- Select none as a style theme.
- Select your tooltip from the Content list

6. Final steps

Optionally change the event of your behavior, we leave it on onmouseover.

Save the files and upload them to your server. The end result should be similar to the screenshot below.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display [rich content](#) and tips with just a few clicks.

Customize the display of the tool include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

The Basics: Adding Tooltips with HTML Content

Introduction

In this tutorial we'll show you how to create a tooltip that displays content from a <div> that is hidden on the page.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Customize the display of the tooltips, including the style, color and position. Apply rich designs, include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

Creating the DIV

1. Create a new HTML page
Create a new or open an existing HTML page. We add a few lines of text and an image:

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Customize the display of the tooltips, including the style, color and position. Apply rich designs, include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

2. Insert the div

We insert a div onto our page, add some content and name the div **"tip"** and set it's visibility to hidden (you can use an APdiv if you prefer).

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

Rich Content contains a combination of content forms:

<body> <div#tip>

▼ Properties

Div ID: tip

Class: None

Edit CSS

Adding the Tooltip

1. Adding the behavior

Select the text or image on the page where you want to apply the tooltip, open the **Behavior** panel in Dreamweaver, select the **Behaviors** tab press on the + icon and choose **DMXzone -> Show Advanced Tooltip**.

A new popup appears

3. Setting the Positioning and Contents options

Select the div named **tip** in the **Content** dropdown box

We set the **Width** and **Height** to **auto**, this means that the size of the tooltip is automatically determined. We define the **Show at** property to **next to the mouse cursor**. We set the **X** and **Y** properties to **cursor** so the tooltip will follow the cursor.

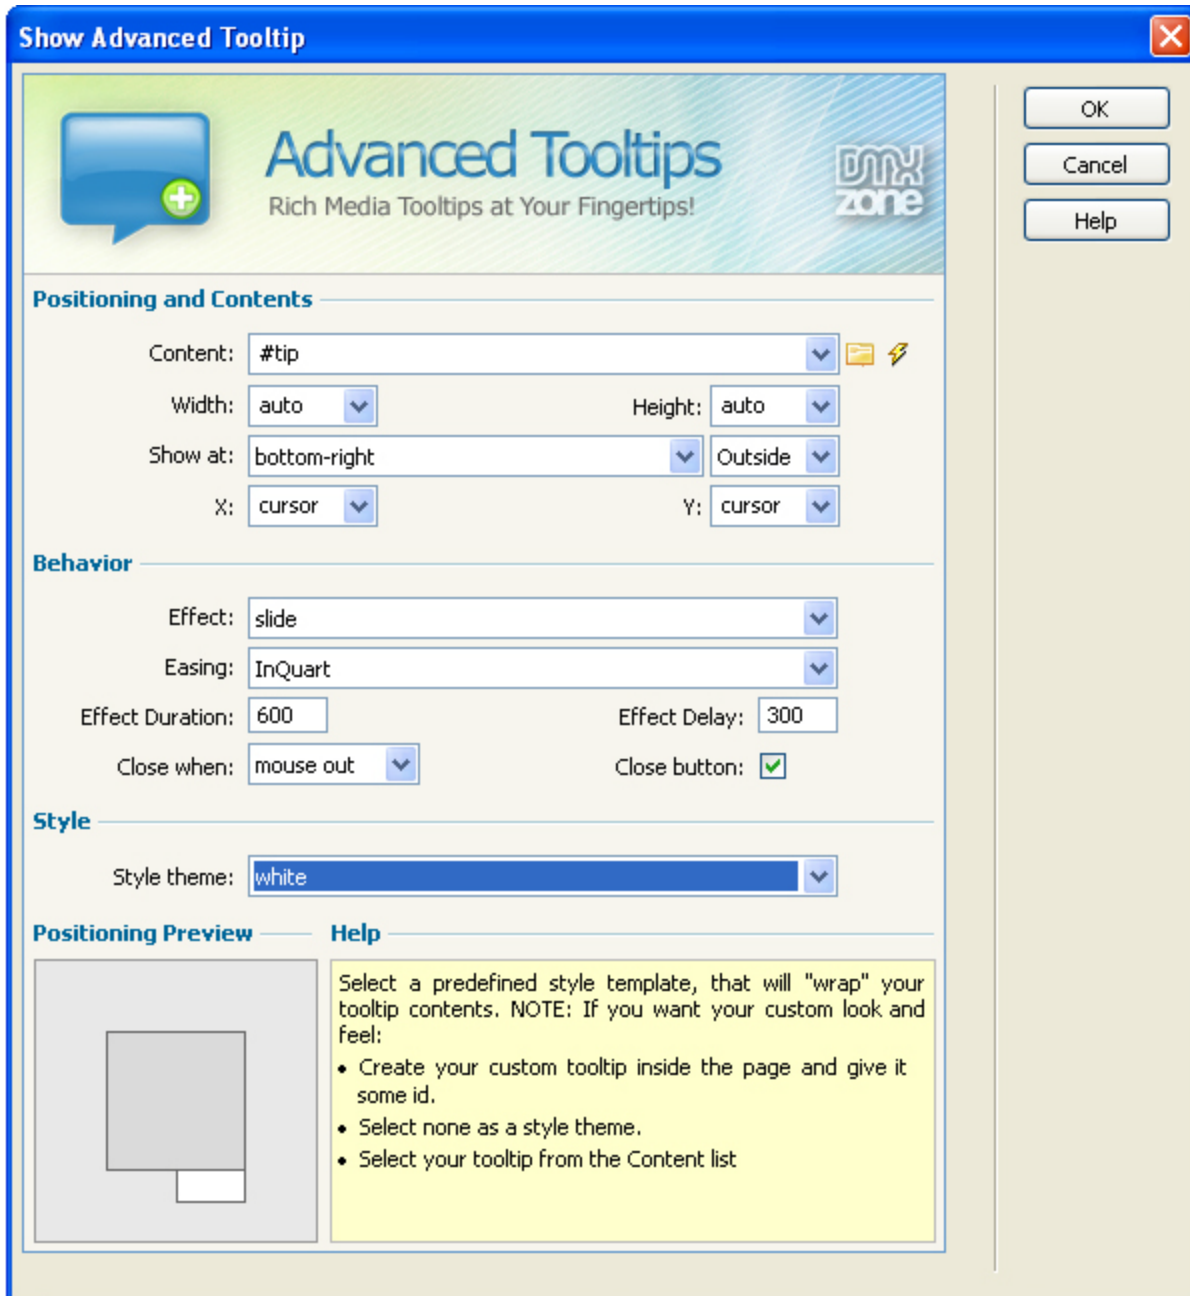

4. Choosing the Behavior options

We set the **Effect** to **slide** and the **Easing** to **InQuart**. Feel to experiment with other effects and easing options and experience the rich range of options and combinations. We the **Effect Duration** to **600** but change the **Effect Delay** to **300** to start the appearance of the tooltip. We also leave the **Close when** option to **mouse out** to hide the tooltip again when we move the mouse out (you can also set

it to **click out**, which requires a click outside the link area to close the tooltip). We check the **Close button** to insert a close button in the tooltip.

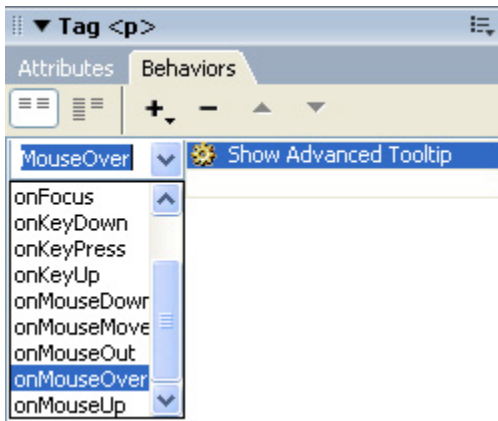

5. Setting the Style options

We set the **Style theme** option to **white**. To give our tooltip a nice white background **with a shadow**. And we press **OK**.

6. Final steps

Optionally change the event of your behavior, we leave it on onMouseOver.

Save the files and upload them to your server. The end result should be similar to the screenshot below.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with...

Customize the designs, including rich content and tips.

Apply **special** tooltips anywhere you like on your site.

Rich Content contains a combination of content forms:

- Document icon
- Headphones icon
- Camera icon
- Video camera icon
- Mouse icon

Applying the Hide Advanced Tooltip Behavior

1. **Adding the behavior**

Select the form field where you applied the **Show Advanced Tooltip** the tooltip, open the **Behavior panel** in Dreamweaver, select the **Behaviors** tab press on the + icon and choose **DMXzone -> Hide Advanced Tooltip** and press **OK**.

2. **Final steps**

Change the event of your behavior to **onBlur** so the tooltip is closed when the user has entered his name and moves the cursor to a next form field.

Save the files and upload them to your server. The end result should be similar to the screenshot below.

Advanced: Adding Tooltips that include an HTML page

Introduction

In this tutorial we'll show you how to include an HTML page into your tooltip.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Creating a Basic Page

Create a new HTML page

Create a new or open an existing HTML page. We add a and image and some text to our page:

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Customize the display of the tooltips, including the style, color and position. Apply rich designs, include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

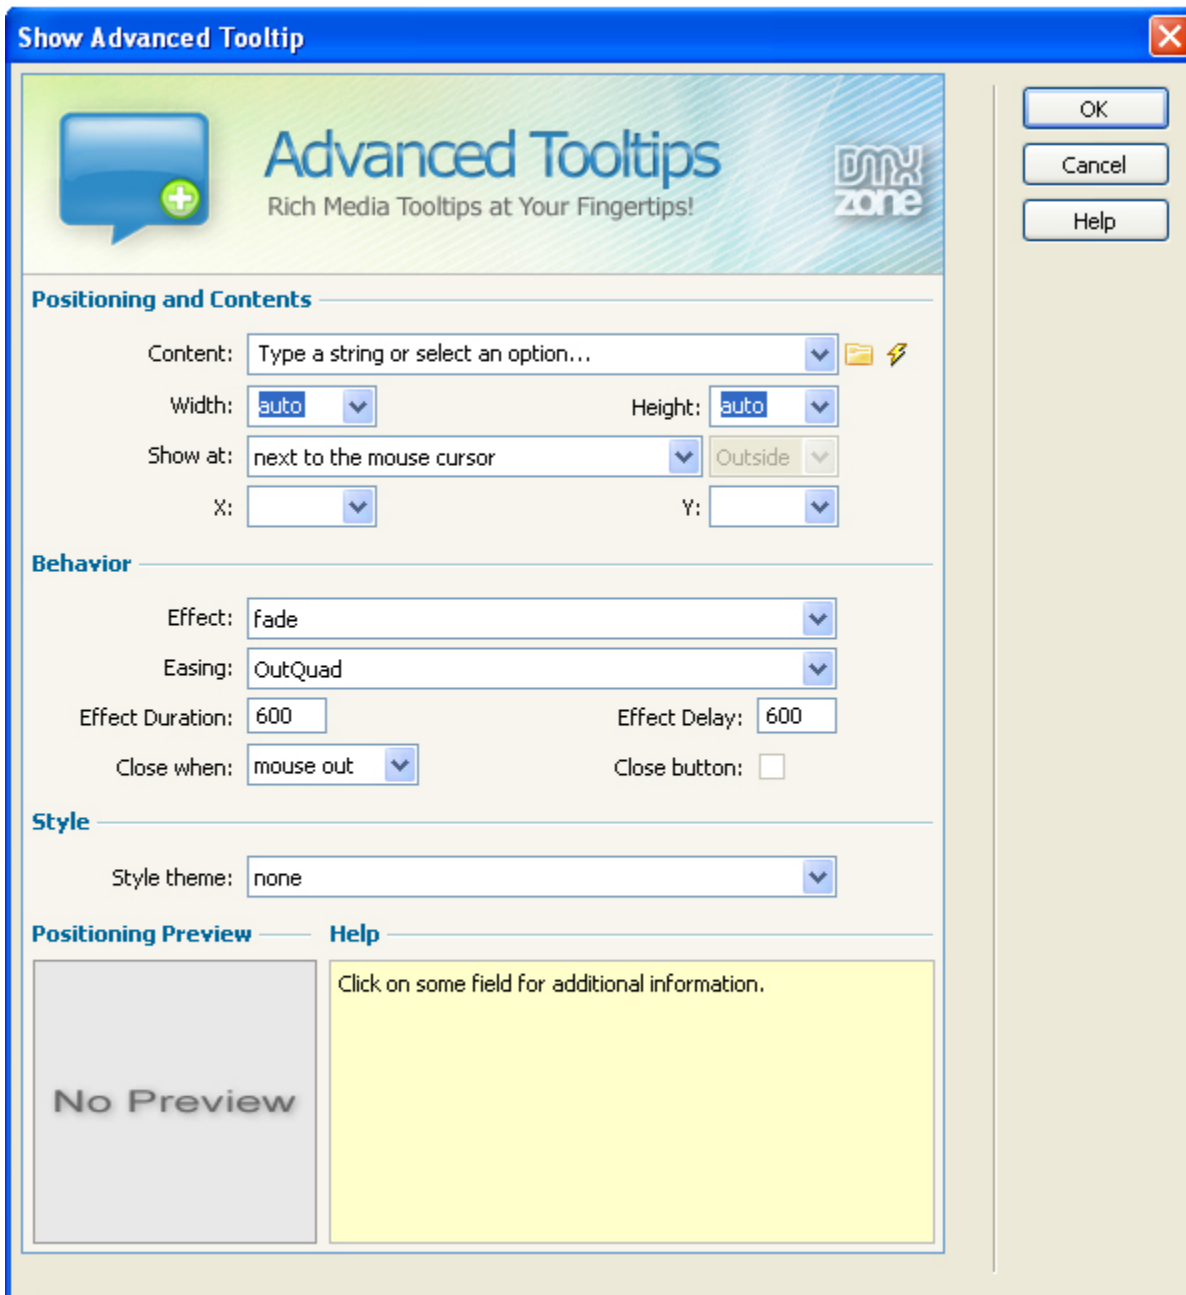

Adding the Tooltip

1. Adding the behavior

Select the text where you want to apply the tooltip, optionally add a # into the text of it's link field so the user can see that the text contains a tooltip because it will have the same markup as a link.

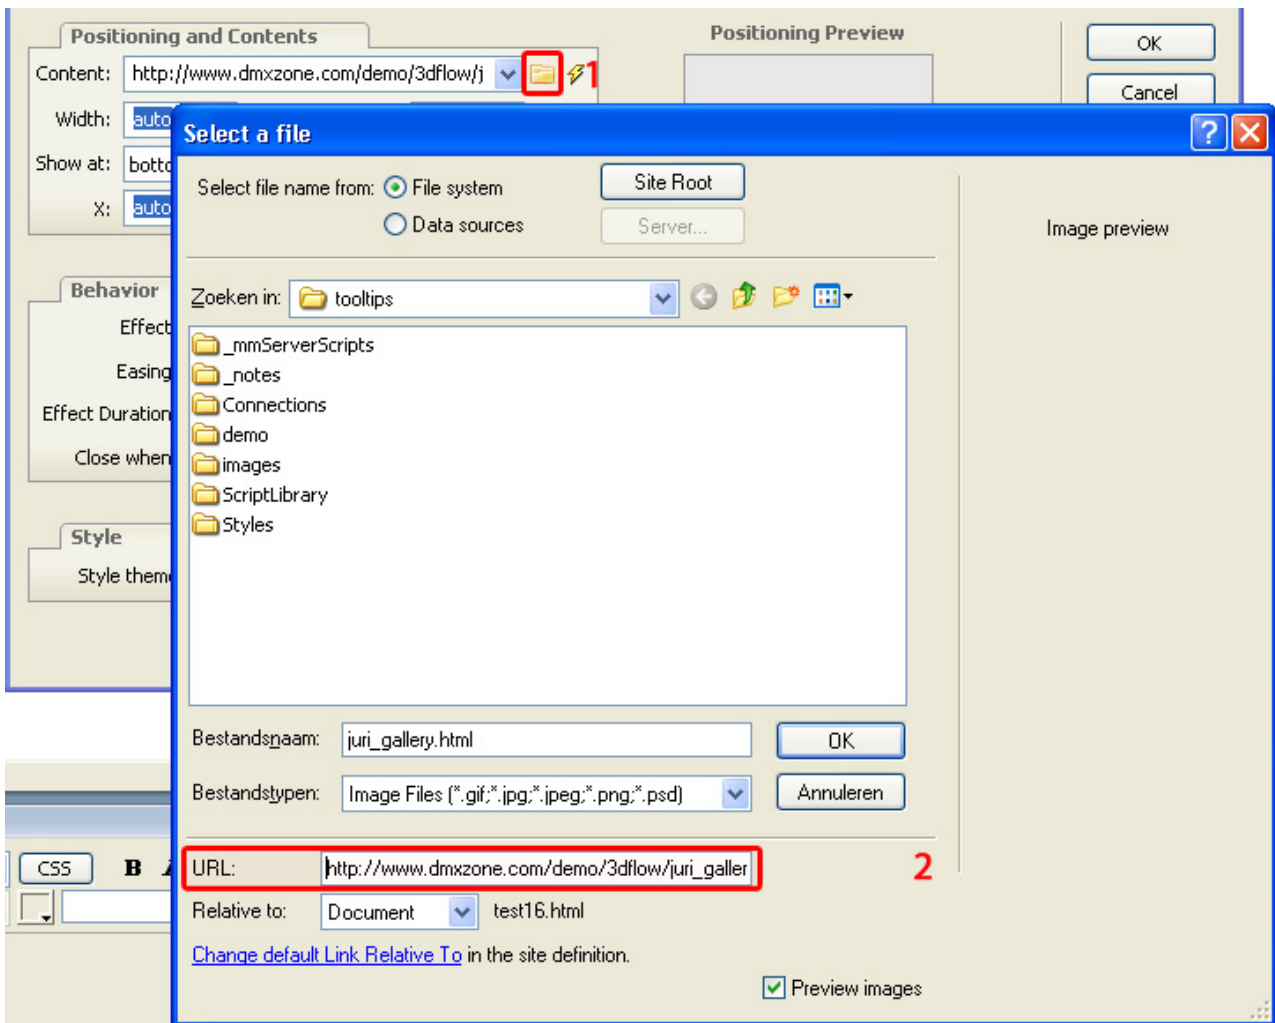

Open the **Behavior panel** in Dreamweaver, select the **Behaviors** tab press on the + icon and choose **DMXzone -> Show Advanced Tooltip**.

A new popup appears

2. Setting the Positioning and Contents options

We select the folder icon next to the **Content** field, and enter the name of the HTML page we want to display, in this case that is: http://www.dmxzone.com/demo/3dflow/juri_gallery/juri_gallery.html . This page contains a gallery that is created with the [3D ImageFlow Gallery](#) extension.

We set the **Width** to **750** and **Height** to **550**. We define the **Show at** property to **left-top**. We set the **X** and **Y** properties to **auto** so the tooltip will stay close to the entry field.

3. Choosing the Behavior options

We set the **Effect** to **fly** and the **Easing** to **InCirc**. Feel to experiment with other effects and easing options and experience the rich range of options and combinations. We the **Effect Duration** to **600** but change the **Effect Delay** to **300** to start the appearance of the tooltip. We also leave the **Close when** option to **mouse out** to hide the tooltip again when we move the mouse out (you can also set it to **click out**, which requires a click outside the link area to close the tooltip). We check the **Close button** to insert a close button in the tooltip.

4. Setting the Style options

We set the **Style theme** option to **white**. To give our tooltip a nice white background **with a shadow**. And we press **OK**.

5. Final steps

Optionally change the event of your behavior, we set it to **onMouseOver**, in this case we leave it to **onClick** so the user sees the tooltip when he enters the form field.

Save the files and upload them to your server. The end result should be similar to the screenshot below.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Advanced: Adding Tooltips that displays dynamic content

Introduction

In this tutorial we'll show you how to include dynamic content using a recordset.

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Customize the display of the tooltips, including the style, color and position. Apply rich designs, include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** such as Slideshows, Fades and more for a staggering user experience and place your tooltips anywhere you like on your site.

Creating a Basic Page

Create a new ASP or PHP page

Create a new or open an existing ASP or PHP page. We'll create an ASP page and add an image and some text to our page:

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Customize the display of the tooltips, including the style, color and position. Apply rich designs, include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** such as for a staggering user experience and place your tooltips anywhere you like on your site.

Adding the Tooltip

1. Adding the behavior

Select the text or image where you want to apply the tooltip. Open the **Behavior** panel in Dreamweaver, select the **Behaviors** tab press on the + icon and choose **DMXzone -> Show Advanced Tooltip**.

Help

2. Setting the Positioning and Contents options

After we've defined our database connection in the **Databases** tab of the **Application** panel and created a recordset, we can include the contents of our database in the tooltip. Select the lightning bold icon next to the **Content Field**.

Select the contents of the recordset you want to include and press **OK**.

Note: that you need to escape special characters so for example if you have the following value in the **Code** field:

```
<%=Recordset.Fields.Item("Name").Value%> then you should replace it by
<%= Replace(Replace(Replace((Recordset.Fields.Item("Name").Value),"'",
"&#39;"),"\"", "&quot;"),"\"","\\") %>
```

This makes sure that you escape single quotes, double quotes and the backslash in the values of your recordset.

We set the **Width** and **Height** to **auto**, this means that the size of the tooltip is automatically determined. We define the **Show at** property to **left-top**. We set the **X** and **Y** properties to **auto** so the tooltip will stay close to the entry field.

3. Choosing the Behavior options

We set the **Effect** to **fly** and the **Easing** to **InCirc**. Feel to experiment with other effects and easing options and experience the rich range of options and combinations. We the **Effect Duration** to **600** but change the **Effect Delay** to **300** to start the appearance of the tooltip. We also leave the **Close when** option to **mouse out** to hide the tooltip again when we move the mouse out (you can also set it to **click out**, which requires a click outside the link area to close the tooltip). We check the **Close button** to insert a close button in the tooltip.

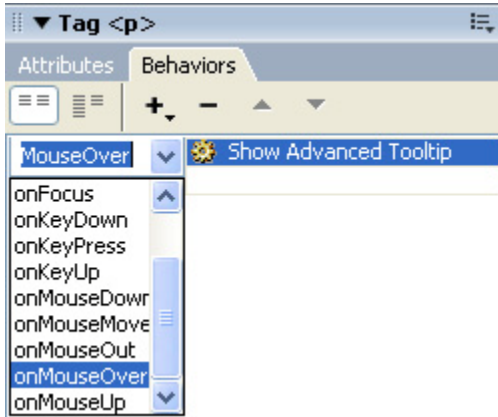

4. Setting the Style options

We set the **Style theme** option to **white**. To give our tooltip a nice white background **with a shadow**.

And we press **OK**.

5. **Final steps**

Optionally change the event of your behavior, we leave it on onMouseOver.

Save the files and upload them to your server. The end result should be similar to the screenshot below (but with different content in your tooltip).

Advanced DMXzone Tooltips

Create a Rich Media Tooltips, provide online help, zoom in to images display rich content and tips with just a few clicks.

Customize the display of the tooltips, including the style, color and position. Apply rich designs, include and auto-fit photos, slideshows, movies, alerts or other content in your tooltips.

Apply **special transition effects** to your tooltips and place your tooltips anywhere you like on your site.
